Checks passed	Open gaps	Checks run	Pages covered

Checks passed and open gaps by area

Bar length is the check count. Green is passed. Amber is an open gap.

Source: browser sweep of the running dev server, plus tsc --noEmit and vite build. Counts are checks, not unique bugs. The longest bar is Dashboard, 21 checks.

Unknown record ids do not say the id is missing

A bad results id closes the detail panel with no message. A bad alert id and a bad location id silently show the first record. Known ids open the right record, /models redirects to System, and an unknown path returns to the dashboard.

Gaps

ROUTE	CONDITION	WHAT HAPPENED	EXPECTED
/results/NOPE	Desktop, signed in	Results stays up. No detail heading and no error.	A not-found state for that id
/alerts/missing-id	Desktop, signed in	Opens the first alert, restricted-area person detection.	A not-found state, not another alert
/localization/NOPE	Desktop, signed in	Target details stay on AL-001.	A not-found state, not the first target

Area totals

AREA	PASSED	GAPS	WHAT THE CHECKS COVERED
Compile	2	0	tsc --noEmit and vite build both exited 0
Routes	8	0	Six pages, /models to System, unknown path to dashboard
Deep links	3	3	R024, alert a1, and AL-001 open; three bad ids do not
Dashboard	21	0	Live, model, search, theme, bell, modals, View All
Detection	5	0	Empty RGB, E2 block, JSON and objects tabs

AREA	PASSED	GAPS	WHAT THE CHECKS COVERED
Results	5	0	Page 2, date sort, empty filter, reset, export toast
Alerts	3	0	High tab, acknowledge toast, empty search reset
Localization	4	0	Empty search, reset, download toast, elevation profile
System	3	0	Save, full log list, account menu reads Operator
Auth	5	0	Logout confirm, cancel, sign-out, short password, sign-in
Layout	16	0	Phone and tablet fit, drawer, dark mode, map zoom

Conditions

Desktop, 1680 light

Live pauses and resumes with a toast. YOLO E1 switches the checkpoint. A recent detection opens a dialog and Escape closes it. An alert opens resolution actions; Escalate toasts and closes. Search with no match shows Reset search and a No matches preview; R001 shows hits. Mark all as read hides the bell badge. Maximize closes on Escape. Each View All lands on Localization, Results, or Alerts. The name Piyush Kumar is absent.

Detection and results data

The detection page starts with a sample RGB frame, so Run Detection does not ask for a file until that frame is removed. After removal, the page says RGB image is required. E2 Fusion is selectable and the run stops with the fusion-not-available message. The JSON tab then still describes the last applied E0 result. Results page 2 lists R016 through R011. Sorting Date and Time moves the first row from R024 to R001. Export toasts “Exported 24 results”.

Theme, phone, and tablet

Dark mode adds the dark class on the document and switching back removes it. At 390px, Dashboard, Detection, Results, Alerts, Localization, and System all stay within the viewport. The menu button opens the drawer and the backdrop closes it. At 768px the same six pages fit, the menu stays available, and dark mode does not add horizontal scroll. The elevation profile shows the 135 m point. Dashboard zoom and reset controls are present.

Signed out

Logout asks for confirmation. Cancel stays on Detection. Confirm shows Operator sign in with no personal name. A two-character password is rejected. The password “operator” signs back in and returns to Detection with a Signed in toast.

Build output: dist/assets/index-C2cRgh-V.js 413.18 kB (119.72 kB gzip) and dist/assets/index-Bq3mJL2-.css 43.04 kB (8.29 kB gzip). No Vite error overlay appeared during the sweep. The repo has no automated browser suite; these checks were run against the live dev server.
